

CONVERTIBLE LUGGAGE DEVICE

Abstract of the Disclosure

A convertible luggage device including a retractable handle assembly and at least one pair of extendable wheels. Included is a brake system operating to lock at least one of the wheels. In one aspect, the device forms a stroller. In another aspect, the device includes straps for engaging a car seat or a basket for receiving luggage or other items. By embodying a broad wheel base, the present invention provides a stable platform for pushing or pulling luggage or for performing as a stroller.
